## PRECAUTIONARY STATEMENTS HAZARDS TO HUMAN AND DOMESTIC ANIMALS

DANGER : Highly corrosive. Causes irreversible eye damage and skin burns. Do not get in eves, on skin, or on clothing. Wear googles or face shield and rubber gloves when handling this product. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing and shoes before reuse. May be Fatal if swallowed. Irritating to nose and throat. Avoid breathing dust.

#### Personal Protective Equipment (PPE)

Applicators and other handlers must wear:

- Α. Googles or face shield
- Long-sleeved shirt and long pants Β.
- Rubber gloves C.
- Shoes plus socks D

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Environmental Hazards: This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans or other public waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this prod uct to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARDS: Strong Oxidizing Agent: Mix only with water Never add water to product. Always add product to large quantities of water. Do not mix with any other chemicals. Use only a clean, dry utensil made of metal or plastic each time product is taken from container. Do not add this product to any dispensing device containing remnants of any other product. Such use may cause a violent reaction leading to fire or explosion. Contamination with moisture, acids, organic matter, other chemicals, or easily combustible materials such as petroleum or paint products may start a chemical reaction with generation of heat, liberation of hazardous gases, and possible generation of a fire or explosion. In case of contamination or decomposition, do not reseal container. If possible isolate container in open air or wellventilated area. Flood area with large volumes of water, if necessary.

# ECR CALCIUM **HYPOCHLORITE AST**

Dry Chlorinating Tablets for Industrial and Potable Water and Swimming Pool Water Treatment Applications

**Active Ingredient:** 

Calcium Hypochlorite	68.0%
Inert Ingredients	
Total	100%
Minimum 65% Available Chlorine	

**KEEP OUT OF REACH OF CHILDREN** DANGER

Do not mix with other chemicals. Always add product to water - Do not add water to product. See additional precautionary statements on back panel.

First Aid: If in eyes, hold eye open and rinse slowly and gently with water for 15-20 minutes. Remove contact lenses, if present, after the first 5 minutes, then continue rinsing eve. Call a poison control center or doctor for treatment advice. If on skin or clothing, take off contaminated clothing. Rinse skin immediately with plenty of water for 15-20 minutes. Call a poison control center or doctor for treatment advice. If swallowed, call poison control center or doctor immediately for treatment advice. Have person sip a glass of water if able to swallow. Do not induce vomiting unless told to do so by the poison control center or doctor. Do not give anything by mouth to an unconscious person. If inhaled, move person to fresh air. If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible. Call a poison control center or doctor for further treatment advice.

Note to physician, probable mucosal damage may contraindicate the use of gastric layage. Contact In-FOTRAC® at 1-800-535-5053 or your poison control center for 24-hour emergency medical treatment information. Have the product container or label with you when calling a poison control center or doctor, or going for treatment.

EPA Reg. No. 86460-4 □ EPA Est. No. 88420-CA-001 EPA Est. No. 074815-IND-001 CAS # 7778-54-3

## STORAGE AND DISPOSAL Read before using

#### Do not contaminate food or feed by storage, disposal, or cleaning of equipment.

Pesticide Storage- Keep this product dry in a tightly closed container when not in use. Store in a cool, dry, well ventilated area away from heat or open flame. In case of decomposition, isolate container (if possible) and flood area with large amounts of water to dissolve all materials before discarding this container.

Pesticide Disposal - Pesticide wastes may be hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of use according to label instructions, contact you State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance. Container Disposal - Non-Refillable container. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two or more times. Then offer for recycling if available or place in trash collection.

Some oils, lotions, fragrances, cleaners, etc. may cause foam- r cloudy water as well as reduce the efficiency of this product. aintain the water, apply 0.5 oz. of this product per 500-gallon	AQUAFIT ECR Calcium Hypochlorite AST tablets are designed to be used in tablet chlorinator systems. The tablets provide a minimum of 65% available chlorine. The tablets are placed in the chlorinator and the bottom layer of tablets is eroded as water flows through or into the chlorinator. The inlet water flow controls the rate of chlorination; higher flows result in higher delivery of available chlorine. The Application Rates section provides the levels of free residual chlorine needed to prevent or address bio-fouling occurring in drip, micro, sprinkler, or trickle irrigation systems. Consult the instruction manual for the chlorinator system to determine how to achieve this level with the tablet chlorinator in use. This product is to be applied through drip, micro, sprinkler, or trickle sprinkler irrigation systems only for agricultural crops only where this manner of use will not cause crop damage. <b>APPLICATION RATES</b> If the irrigation water has high levels of nutrients causing bacterial, algal, or other bio-fouling that reduces system performance, continuous use of this product may be necessary. The recommended level of free residual chlorine for continuous feed is 1 to 2 ppm, measured at the end of the farthest lateral using a good quality test kit for free chlorine (also called "free residual" or "free available" chlorine in the drip system and monitor the free chlorine residual at the end of the farthest lateral using a spot systems if dogged by algae and bacterial slimes. Set the chlorinator to deliver 100 ppm in the drip system and monitor the free chlorine residual at the end of the farthest lateral. As soon as it is established that the free residual reading is between 10 and 20 ppm, shut the system down and leave it undisturbed for up to 24 hours. Then flush all submains and laterals with fresh water. Superchlorination, will not dissolve/remove scale or inorganic sediment fouling. "Note: To correctly establish the dose setting required, it is necessary to measure the free chlorine concentration (ppm)

#### Chlorine potable water treatment compounds.

Chlorine may be present in processing water of meat and poultry plants at concentrations up to 5 parts per million calculated as available chlorine. Chlorine may be present in poultry chiller intake water, and in carcass wash water at concentrations up to 50 parts per million calculated as available chlorine. Chlorine must be dispensed at a constant and uniform level and the method or system must be such that a controlled rate is maintained.

Cooling and retort water treatment compounds.

Chemical agents may be added to water used to cook and cool containers of meat and poultry products to prevent staining of containers and to control corrosion and deposit formation on surfaces of processing equipment. The amount used should be the minimum sufficient for the purpose. Calcium hypochlorite solutions providing 1% available chlorine should be fed into tanks or channels by an elevated tank to provide a concentration of 2 ppm available chlorine. The flow may be controlled with a noncorroding valve or a pinch-stop on a rubber hose. Feed points should be located to provide uniform distribution of solution throughout the entire system. Long and narrow tanks may require the solution to be fed at two points to insure proper distribution. Test the water for available chlorine every hour until dosage requirements are established. Thereafter, check every 2 or 3 hours to ascertain that an available chlorine residual of 2 ppm is maintained throughout the system.

Compounds for treating boilers, steam lines, and/or cooling systems where neither the treated water nor the steam produced may contact edible products. This does not include compounds added to water used to cook and cool containers of meat and poultry products. A clogged or foulded system should be mechanically cleaned to remove all physical soil prior to beginning treatment. Initially, treat by adding enough calcium hypochlorite to provide 10 ppm available chlorine (2 ounces per 1000 gallons) as a shock dosage and circulate it thoroughly through the system. Then, for continuous preventative control of algae and slime growth, regularly add enough calcium hypochlorite to the recirculation system to maintain a 1.0 ppm free chlorine residual. Other water condition factors, such as pH, should be controlled as recommended by the equipment manufacturer.

Environmental Compliance Resources LLC, Cheyenne, Wyoming 82007 www.ecr-world.com

### Disinfection of Drinking Water (Potable Water)

Mix a ratio of 1 ounce of this product to 6000 gallons of water. Begin feeding this solution with a hypochloriavailable chlorine residual of at least 0.2 ppm and no more than 0.6 ppm is attained throughout the distribuk water frequently with a chlorine test kit. Bacteriological sampling must be conducted at a frequency no scribed by the National Interim Primary Drinking Water Regulations. Contact your local Health Department

ms: Dug Wells - Upon completion of the casing (lining) wash the interior of the casing (lining) with a 100 orine solution using a stiff brush. This solution can be made by thoroughly mixing 1 ounce of this product into r. After covering the well, pour the sanitizing solution into the well through both the pipe sleeve opening and h the exterior of the pump cylinder also with the sanitizing solution. Start pump and pump water until strong water is noted. Stop pump and wait at least 24 hours. After 24 hours flush well until traces of chlorine have m the water. Contact your local Health Department for further details.

Systems: Drilled, Driven & Bored Wells - Run pump until water is as free from turbidity as possible. Pour ole chlorine sanitizing solution into the well. This solution can be made by thoroughly mixing 1 ounce of this allons of water. Add 5 to 10 gallons of clean, chlorinated water to the well in order to force the sanitizer into h. Wash the exterior of pump cylinder with the sanitizer. Drop pipeline into well, start pump and pump water of chlorine in water is noted. Stop pump and wait at least 24 hours. After 24 hours flush well until all traces of n removed from the water. Deep wells with high water levels may necessitate the use of special methods for sanitizer into the well. Consult your local Health Department for further details. Flowing Artesian Wells herally do not require disinfection. If analyses indicate persistent contamination, the well should be disinjur local Health Department for further details.

**Infection:** When boiling of water for 1 minute is not practical, water can be made potable by using this iddition of the sanitizer, remove all suspended material by filtration or by allowing it to settle to the bottom. and contaminated water to a clean container and add 1 grain of this product to 1 gallon of water. One grain is size of the letter "O" in this sentence. Allow the treated water to stand for 30 ninutes. Properly treated water th chlorine odor, if not, repeat dosage and allow the water to stand an additional 15 minutes. The treated made palatable by pouring it between clean containers for several times.

esigned to be used in tablet chlorinator systems. The tablets provide a minimum of 65% available chlorine. aced in the chlorinator and the bottom layer of tablets is eroded as water flows through or into the chlorinaer flow controls the rate of chlorination; higher flows result in higher delivery of available chlorine. Consult nual for the chlorinator system to determine how to achieve this level with the tablet chlorinator in use.

ypochlorite Uses: Calcium Hypochlorite is also used in the sanitization of water systems, public wells, nains, sanitization in the food industry, odor and taste control in potable water systems, algae control in rial cooling water systems, and general industrial sanitization.

## **PRECAUTIONARY STATEMENTS** HAZARDS TO HUMAN AND DOMESTIC ANIMALS

DANGER : Highly corrosive. Causes irreversible eye damage and skin burns. Do not get in eves, on skin, or on clothing. Wear goggles or face shield and rubber gloves when handling this product. Wash thoroughly with soap and water after handling and before eating, drinking, chewing gum, using tobacco, or using the toilet. Remove and wash contaminated clothing and shoes before reuse. May be Fatal if swallowed. Irritating to nose and throat. Avoid breathing dust.

### Personal Protective Equipment (PPE)

## Applicators and other handlers must wear:

- Goggles or face shield Α.
- Β. Long-sleeved shirt and long pants
- C. Rubber gloves
- D Shoes plus socks

Follow manufacturer's instructions for cleaning/maintaining PPE. If no such instructions for washables, use detergent and hot water. Keep and wash PPE separately from other laundry.

Environmental Hazards: This pesticide is toxic to fish and aquatic organisms. Do not discharge effluent containing this product into lakes, streams, ponds, estuaries, oceans, or other public waters unless in accordance with the requirements of a National Pollutant Discharge Elimination System (NPDES) permit and the permitting authority has been notified in writing prior to discharge. Do not discharge effluent containing this product to sewer systems without previously notifying the local sewage treatment plant authority. For guidance contact your State Water Board or Regional Office of the EPA.

PHYSICAL OR CHEMICAL HAZARDS: Strong Oxidizing Agent: Mix only with water. Never add water to product. Always add product to large quantities of water. Do not mix with any other chemicals. Use only a clean, dry utensil made of metal or plastic each time product is taken from container. Do not add this product to any dispensing device containing remnants of any other product. Such use may cause a violent reaction leading to fire or explosion. Contamination with moisture, acids, organic matter, other chemicals, or easily combustible materials such as petroleum or paint products may start a chemical reaction with generation of heat, liberation of hazardous gases, and possible generation of a fire or explosion. In case of contamination or decomposition, do not reseal container. If possible isolate container in open air or wellventilated area. Flood area with large volumes of water, if necessary,

STORAGE AND DISPOSAL Read before using

Do not contaminate food or feed by storage, disposal, or cleaning of equipment.

Pesticide Storage- Keep this product dry in a tightly closed container when not in use. Store in a cool, dry, well ventilated area away from heat or open flame. In case of decomposition, isolate container (if possible) and flood area with large amounts of water to dissolve all materials before discarding this container.

Pesticide Disposal - Pesticide wastes may be hazardous. Improper disposal of excess pesticide, spray mixture or rinsate is a violation of Federal Law. If these wastes cannot be disposed of use according to label instructions, contact you State Pesticide or Environmental Control Agency, or the Hazardous Waste Representative at the nearest EPA Regional Office for guidance. Container Disposal - Non-Refillable container. Triple rinse as follows: Empty the remaining contents into application equipment or a mix tank. Fill the container 1/4 full with water. Replace and tighten closures. Tip container on its side and roll it back and forth, ensuring at least one complete revolution, for 30 seconds. Stand the container on its end and tip it back and forth several times. Turn the container over onto its other end and tip it back and forth several times. Empty the rinsate into application equipment or a mix tank or store rinsate for later use or disposal. Repeat this procedure two or more times. Then offer for recycling if available or place in trash collection.
